

27.11.2025
PARIS

The logo features a white location pin icon on a blue background, with a dashed white line curving around it. Below the icon, the text "FRANCE-IX" is written in white, bold, uppercase letters, and "TOUR" is written in a smaller, white, uppercase font below it.

FRANCE-IX
TOUR

The logo consists of the numbers "15" in a stylized, colorful font. The "1" is orange and pink, and the "5" is blue and green. Below the numbers, the word "ANS" is written in black, and "ÉDITION SPÉCIALE" is written in black, uppercase letters to the right.

Global & technical news

Franck Simon – President
France-IX

We have been proudly supporting our clients for **15 years, consistently delivering over 99.995% monthly availability.**

Huge thanks to our clients and our team for making it possible to deliver **genuine, impactful service.**

However, today is not about our performance (you can read some on our display banners anyway).

Today, we'll be talking about something brand new.

2025: a base that is more robust than ever

An even more robust platform

Migration to Nokia completed in 2025, ensuring maximum network stability.

A stronger organization

New roles and responsibilities, new key hires, and the continued dedication of your existing France-IX experts.

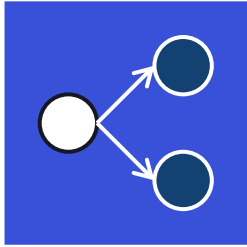

A modern base: launching Self-Service

We launched our new client portal to deliver sustained updates. Since its launch this Spring, we have added **order tracking**, access to **documentation**, a new **dashboard**, and the deployment of our **Self-Service feature (starting with Multipass)**.

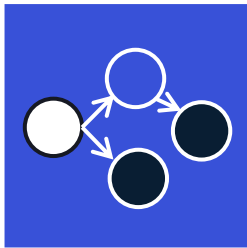

Truly interconnecting France

Bridging the network gap

Multipass: access all our cities from a single port, regardless of distance.

This facilitates access to our nationwide network coverage (or capillarity) to better interconnect France, reaching far beyond Paris and Marseille, from Bordeaux to Lyon, and from Lille to Toulouse.

Broader reach: access to all commodity clouds + direct access to sovereign Cloud providers.

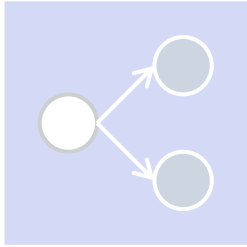

The first connected provider is Scaleway, with others to come.

Caches: erasing distances.

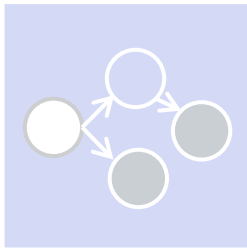

Although major content providers are connected to France-IX in Paris and Marseille, they are not always connected in every city. Our job is to bring content closer to our communities and erase those distances. And we did it.

Bridging the network gap

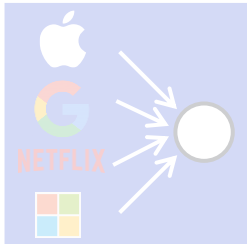

Multipass: access all our cities from a single port, regardless of distance.

This facilitates access to our nationwide network coverage (or capillarity) to better interconnect France, reaching far beyond Paris and Marseille, from Bordeaux to Lyon, and from Lille to Toulouse.

Broader reach: access to all commodity clouds + direct access to sovereign Cloud providers.

The first connected provider is Scaleway, with others to follow.

Caches: erasing distances.

Although major content providers are connected to France-IX in Paris and Marseille, they are not always connected in every city. Our job is to bring content closer to our communities and erase those distances. And we did it.

Let's make peering even more accessible.

Making peering more accessible

- ✓ **Cost-oriented pricing**
The hallmark of peering.
- ✓ **2025: average price reduction of 15% and Multipass activation with no extra-cost,**
with Multipass traffic included in the peering service.
- ✓ **Pricing transparency**
Our pricing grids will be back online starting in January.

We are studying the feasibility of launching a streamlined peering service.

"One more thing"

Meshing France...

- ✓ Connecting communities across France.
- ✓ Erasing distances across France.
- ✓ Making peering even more accessible in France.

🚀 Serving a better Internet: We do good, and we do it well.

Meshing France... and beyond

- ✓ Connecting communities across France.
- ✓ Erasing distances across France.
- ✓ Making peering even more accessible in France.

 Serving a better Internet: We do good, and we do it well.

The Internet is global. We want to make it better, but something is still missing.

- ▶ Connecting communities in Europe.
- ▶ Erasing distances in Europe.
- ▶ Making peering even more accessible in Europe.

Let's bet on cooperation

Being a lone
IXP facing the
giants

Creating a
European IXP
from scratch

Merging with
other IXPs

Cooperating
with other IXPs

Our core job is to connect communities (this is the essence of the Internet). Ensuring data is accessible in a secure, robust, reliable, and optimized manner must be addressed **at a continental scale.**

Interconnection services rely on network effects for success, demanding **density** and the **avoidance of dilution.**

While competition tends to **cannibalize** communities, **our goal is to multiply them.**

Therefore, we choose to **cooperate.**

Interconnecting with our neighbours

We are enhancing our existing interconnections with **TOP-IX** and **LU-CIX**.

We have announced an interconnection agreement with **AMS-IX**.

We are in talks with **MIX**.

Tonight, we are thrilled to reveal a new agreement with ESpanix.

The beginning of a European endeavour

An initiative is being launched to bring together **cross-border collaboration** for all interested IXPs

A single port. International communities, networked.
IXP cooperation, at a European scale.

The **cooperation** starts this week.

Let's chat, with a glass in our hands !

Let's enjoy the cocktail, the photobooth and celebrate this 15th birthday !
